

*As a world leader, we take pride in knowing that our products help move millions of people and countless tons of cargo safely and securely, in the air and on the ground. Our restraint systems are in service 24 / 7 / 365 and can be found on virtually every airline flying in the world today. This world presence is a valuable part of our reputation and as such, so is the environment. We at AmSafe Bridport carefully review our activities and operations to identify any impact they may have on the environment and prioritize actions to mitigate them.*

*As part of our environmental mission, we actively:*

- *Set challenging environmental targets to reduce energy and resource consumption, minimise the amount of waste generated and minimise the use of harmful materials and prevent pollution.*
- *Operate an effective Environmental Management Programme to pursue continuous improvement through an internal audit and management review process.*
- *Promote a high level of awareness of sustainability issues amongst our employees and have environmental management as a key element of our training programs.*
- *Meet or exceed all relevant legislative and regulatory requirements.*
- *Ensure that goods and services procured support our sustainable code of conduct, and in turn, encourage our suppliers and contractors to improve their own environmental performance.*
- *Take utmost initiatives toward being carbon neutral.*
- *Monitor progress against targets, reduce our ecological footprint and produce an annual Environmental Report.*
