

Tie-down Straps

Guaranteed to hold 5,000lbs.

AmSafe® tie-down straps have less than 10% stretch which is why more commercial airlines use our Tiger tie-downs to secure their cargo. Although most other straps have a 30% stretch, we manufacture a degradation factor into our tie-downs to ensure that the elongation will remain at less than 10% from the first time it's used until the final day of service.

The Tiger tie-down is the first strap to be certified to ISO16049-1. It meets the requirements of the International Air Transport Association (IATA) standard specification 60/2, which requires a maximum 10% elongation and no slippage in the buckle. AmSafe Tiger tie-down straps also meet the proposed TSO-C172 certification.

Tiger tie-downs are just one in a range of innovative products from AmSafe. Other product offerings include pallet nets (both classic and QuickZip®), container door nets, 9g barrier nets and under-floor restraint nets. Our service center network of FAR 145 facilities not only provides global coverage and comprehensive local support, but also carries a complete stock of nets, straps and hardware.

Tie-down Straps

Look for the AmSafe Tiger logo on all of your straps

AmSafe maintains a staff of skilled engineers who design and manufacture our products in a state-of-the-art facility. Our highly trained production staff is committed to quality and every production run is batch tested to rigorous QA specifications. All of our tie-down straps can include customer-specific information printed directly on the webbing for a clear point of reference when cargo is secured. A range of standard webbing colors is also available with a choice of either the standard over-center or ratchet buckle.
