

Helicopter Under-Slung Cargo Nets – Military

Used by the world's armed forces.

When the military needs to move supplies and equipment into areas of conflict or natural disaster speed is vital. Whether you are delivering medical supplies to field hospitals in sub-zero temperatures or dropping vehicles into harsh desert environments, AmSafe® has a Helicopter Under-Slung Load Equipment (HUSLE) solution to meet your requirements. Over 30 of the world's armed forces, aid relief agencies and commercial operators trust the continuous research and development of our HUSLE products.

Helicopter under-slung cargo nets are manufactured using AmSafe's innovative knotless intersections and provide safe working loads up to 15,000lb. These cargo nets are constructed from high-quality braids that are treated with abrasion-resistant chemicals to increase the product's durability and working life. Load-position markers, which aid in load-build and placement of cargo, are a standard feature of our HUSLE nets. To further increase the net's capabilities, optional upgrades including protection pads, protective carrying bags and lifting extension-straps are also available.

AmSafe's experienced engineers and technical authors offer advice as well as customized user manuals and publications to support our range of products. To ensure continuous product improvement, AmSafe works closely with users and a number of trial and evaluation organizations and we offer maintenance and repair training courses to make certain our HUSLE systems are used to their full potential throughout their working lives.
