

## FACT SHEET

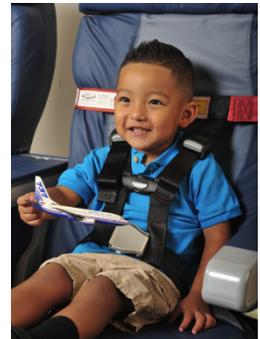

**Company Name** Kids Fly Safe

**Mission Statement** Provide a hassle-free, easy way to travel safely on airplanes with young children 1-5 years old.

The Kids Fly Safe CARES® Airplane Safety Harness is designed specifically for children who are old enough to be in their own seats, but too small for the seat belt alone to adequately protect them during airplane travel. Parents want their children to be as safe as possible when flying but without the frustration of lugging heavy, bulky, car seats through busy airports and onto airplanes.

**Company Snapshot** Kids Fly Safe is a trade name of AmSafe, Inc. AmSafe is the world's leading provider of safety restraint products for the aerospace, defense, specialty and vehicle industries. Protecting passengers is a priority to AmSafe and our products help move millions of people and countless tons of cargo safely and securely in the air and on the ground.

**Background** We secure our luggage better than we secure what's most precious to us – our smallest children! The Federal Aviation Administration (FAA) says "Turbulence can happen with little or no warning. And when it does, the safest place for your child is in a child restraint system (CRS) not in an adults lap". Children over the age of 2 are required to be in their own airline seats but the regular lap belt does not provide enough protection for them. For this reason, the FAA, the National Transportation Safety Board, the American Academy of Pediatrics, and even the airlines urge parents to bring along certified child restraints for their children when they fly.

**Product Info** CARES® Airplane Safety Harness is designed for children 22-44 lbs. (10 - 20 kg) who sit in their own seat. CARES® works with the regular airplane lap belt but adds extra safety by also securing and supporting the child's upper body. CARES® is compact, light-weight (weights less than 1 pound), and is quick and simple to set up. CARES® is the *only* FAA certified harness-type child restraint and it can be used for the entire flight – taxi, take off, turbulence and landing. CARES® fits most airplane seats and can be used on any U.S. registered aircraft flying domestically or internationally. CARES® is also certified by the aviation authorities in Canada, UK, Australia, New Zealand, France, Switzerland, Singapore, Japan and others.
